# None of the Divestment, All of the Security

Designed to provide the highest and most accurate security possible, Xtract One Gateway goes beyond basic metal detection by accurately differentiating between everyday items like laptops, tablets, 3-ring binders, eyeglass cases, phones, and keys from dangerous weapons. Its precision minimizes unnecessary disruptions while ensuring genuine threats are reliably and specifically identified. It alerts only to weapons and prohibited items, not everyday items. So privacy is preserved for individuals.

## Accurate Detection Without The Acrobatics

Xtract One Gateway excels in environments where visitors carry numerous personal items. Its ability to detect weapons while ignoring laptops and the other content within backpacks makes it ideal for schools, commercial properties, and other high-traffic areas. It efficiently processes large crowds at a natural walking pace and avoids slowdowns from separate x-rays and bag scanners. Individuals keep their bags with them, not causing disruption in their movement by being requested to hold them above their heads to avoid alerts, or placed on conveyor belts to then pick up again.

## Enhancing Operational Security

Gateway scans both the individual and the bag at the same time, saving space by decreasing exclusion zones and allowing security personnel to focus on real threats. This shift from reactive to proactive security creates a better and more secure experience for individuals and staff, especially in today's challenging staffing environment.

## Adaptable and User-Friendly

Xtract One Gateway's flexible settings allow seamless control to match facility-specific security needs. Its user-friendly interface keeps lines moving swiftly, enhancing efficiency without compromising security. The Xtract One Gateway system can be configured to protect from weapons on ingress and theft of assets on egress, adapting to your changing needs.

## Key Features:

- Weapons detection that classifies the type of threat object and its location without alerting on laptops

- Maintain natural walking pace without divesting bags and personal items

- Lowers Mean Time to Ingress, shortening entry and screening times for all involved

- Screen up to 3000 individuals per hour per lane with minimal operator training

- Protects privacy of the individual, not displaying contents of bags on an x-ray screen

- Customizable object detection settings for ingress and egress

- Accurate threat detection without the guesswork

- All-in-one efficient screening, without extra equipment or conveyer belts

# Hassle Free Implementation.

Upgrading your facility's security is straightforward with Xtract One Gateway. Our expert team will assess your needs and tailor the ideal configuration. We provide comprehensive support and software updates to ensure your solution remains effective against emerging threats.

**Contact us for a site evaluation and discover how Xtract One Gateway can enhance both your security measures and operational efficiency.**

## Efficient, Elevated Security

Gateway's advanced technology allows for uninterrupted pedestrian flow. Security interventions occur only when necessary, maintaining a positive experience for all visitors and staff.

## Adaptable Across Industries

From bustling university campuses to high-stakes corporate environments, Xtract One Gateway adapts to diverse security needs. Our system ensures that whether you're managing morning rushes or all-day foot traffic, your security measures remain robust and unobtrusive.

## Comprehensive Detection

Xtract One Gateway scans individuals and their belongings without separation. It spots the dangerous items but knows the difference between a weapon and your laptop or water bottle. You can walk through normally, keeping your phone, keys, and notebooks right where they are. The system keeps your building secure without slowing down ingress and egress.
